

FitSync — Fitness Gym Management & Member Wellness Platform

Software Project
Proposal

1 • INTRODUCTION

FitSync is a role-based, multi-tenant web platform that brings gym administration, coaching, and member wellness tracking into a single system. It gives four distinct user types — Super Admin, Gym Owner, Trainer, and Member — a dashboard tailored to their responsibilities, replacing the disconnected spreadsheets, register books, and messaging threads that most fitness facilities rely on today.

2 • PROBLEM STATEMENT

Independent gyms typically manage members, attendance, and trainer assignments manually. This creates untracked check-ins, no consolidated view of member progress, no structured way to deliver nutrition guidance, and no reliable mechanism for owners to monitor revenue or growth — all of which limit a facility's ability to retain members and scale operations.

3 • PROPOSED SOLUTION

FitSync centralizes these workflows behind Role-Based Access Control. Each gym operates as an isolated tenant with its own members, trainers, and data. Owners get real-time visibility into revenue and attendance, trainers can log workouts and track client progress, and members receive a personal dashboard with attendance history, workout streaks, and an AI-assisted diet planner — all gated by a Free / Pro subscription model.

4 • OBJECTIVES

- › Provide one platform for admin, coaching and member wellness
- › Enforce strict multi-tenant data isolation per gym
- › Automate attendance capture and history
- › Give owners real-time revenue & growth visibility
- › Deliver AI-assisted, goal-aligned diet plans
- › Gate premium features behind a billed Pro plan

5 • SCOPE & CORE FEATURES

Super Admin

Platform-wide visibility across all gyms, Free/Pro status per tenant, total revenue, suspend/activate gym accounts.

Gym Owner

Member & trainer management, attendance and revenue dashboards, subscription upgrade.

Trainer

Assigned member roster, workout logging, progress and attendance tracking.

Member

Workout schedule/history, attendance log, progress streaks, AI diet plan generator.

6 • TECHNOLOGY STACK

TypeScript

JavaScript

React

Node.js

Express.js

MongoDB

JWT

bcrypt

OpenAI API

Vercel

7 • DEVELOPMENT METHODOLOGY

The system was built iteratively: requirement & role identification, UI/dashboard design per role, module-by-module backend and API development, database schema integration, authentication and access-control implementation, third-party integration (OpenAI), continuous testing/debugging, and deployment to production.

8 • IMPLEMENTED OUTCOME

FitSync is fully built and live in production, with working Super Admin, Gym Owner, Trainer, and Member experiences, functioning attendance and workout modules, a Free/Pro subscription flow, and an AI diet generator that falls back to a built-in sample generator when no OpenAI key is configured.
